(54) Title: INFORMATION APPARATUS

(57) Abstract: It is an object to provide an information apparatus mounting thereon a scheduler function of notifying a predetermined "schedule" as a reminder on a notice "scheduled" date, which can prevent from carelessly notifying old reminders or many unintentional reminders. In the information apparatus which mounts thereon a scheduler function of notifying a predetermined "schedule" as a reminder on a notice "scheduled" date, a reminder notification is validated only for "schedules" to be reminder-notified within a predetermined time from a current date back to the past before the current date as for "schedules" to be reminder-notified in an electronic calendar.
